- Height – 4.34"
- Diameter of dome – 11.75"

Run a channel scan to receive maximum programming. A scan will find any new channels that have been added in your area, plus find any channels that have changed or moved since the last scan. Steps to perform a channel scan vary between televisions/compatible devices; below are general guidelines to follow.

1. Ensure the antenna power supply (wall plate) is in the **"ON" position** and the green indicator light is **illuminated**.
2. Using the television remote, select **MENU** and then **SETTINGS**.
3. Select **CHANNEL SETUP**.
4. Select **ANTENNA** or **AIR** depending on your TV. Make sure you are not on **CABLE**.
5. Select **CHANNEL SEARCH** or **CHANNEL SCAN**. Keep in mind that steps to perform a channel scan may vary. If the wording from your TV differs from the options shown, refer to your TV user manual for help.

NOTE: Running a channel scan is NOT the same as pressing Channel UP/DOWN on your remote.

TIP: To receive maximum programming and keep your channel line-up up-to-date, it is a good idea to run a channel scan monthly, anytime a channel is lost, and **anytime you change locations**.
